

Release Notes

BMI Application

Release Features

Users can calculate their BMI and find out if they are underweight, normal weight, or overweight.

Fixes

Fix #1

Problem with negative numbers is resolved. If users type their weight or height in negative numbers, the system will consider them as positive and bmi will be calculated with positive numbers.

Known Issues and Problems

Issue #1

App doesn't work well if you put string as input.

Workaround

Put numbers instead of string as inputs.
